The Fund invests in financial instruments that ProFund Advisors believes, in combination, should produce daily returns consistent with the Fund's investment objective.

For the year ended July 31, 2025, the Fund had an average daily statistical correlation of over 0.99 to one and one-half times the daily performance of the Index. For the same period, the Index had a total return of 7.31% and a volatility of 29.33%. The index performance was driven by banks lagging in a period of technology outperformance.

Primary factors affecting Fund performance include the total return of the securities and derivatives held by the Fund, the performance of the reference assets to which the derivatives are linked, financing rates paid or earned, expenses, transaction costs, the volatility of the Fund's Index, the impact of compounding, and other miscellaneous factors.
