

PROFUNDS®

Summary Prospectus

NOVEMBER 27, 2024

Short Bitcoin ProFund

| CLASS | TICKER | CUSIP |
|----------|--------|-----------|
| Investor | BITIX | 74318X620 |

This Summary Prospectus is designed to provide investors with key fund information in a clear and concise format. Before you invest, you may want to review the Fund's Full Prospectus, which contains more information about the Fund and its risks. The Fund's Full Prospectus, dated November 27, 2024, and Statement of Additional Information, dated November 27, 2024, and as each hereafter may be supplemented or amended, are incorporated by reference into this Summary Prospectus. All of this information may be obtained at no cost either: online at ProFunds.com/ProFundsinfo; by calling 888-PRO-3637 (888-776-3637) (financial professionals should call 888-PRO-5717 (888-776-5717)); or by sending an e-mail request to info@ProFunds.com. The Securities and Exchange Commission has not approved or disapproved these securities or passed upon the adequacy of this Summary Prospectus. Any representation to the contrary is a criminal offense.

Investment Objective

Short Bitcoin ProFund (the “Fund”) seeks daily investment results, before fees and expenses, that correspond to the inverse (-1x) of the daily performance of the Bloomberg Bitcoin Index (the “Index”).

In this manner, the Fund seeks daily returns that correspond to the inverse (-1x) of the price of bitcoin. **The Fund does not directly short bitcoin.**

Important Information About the Fund

If the Fund is successful in meeting its investment objective, it should gain approximately as much as the Index loses when the Index falls on a given day. Conversely, it should lose approximately as much as the Index gains when the Index rises on a given day. **The Fund does not seek to achieve the inverse (-1x) of the daily performance of the Index (the “Daily Target”) for any period other than a day.**

While the Fund has a daily investment objective, you may hold Fund shares for longer than one day if you believe doing so is consistent with your goals and risk tolerance. **If you hold fund shares for any period other than a day, it is important for you to understand that over your holding period:**

- Your return may be higher or lower than the Daily Target, and this difference may be significant.
- Factors that contribute to returns that are worse than the Daily Target include smaller Index gains or losses and higher Index volatility, as well as longer holding periods when these factors apply.
- Factors that contribute to returns that are better than the Daily Target include larger Index gains or losses and lower Index volatility, as well as longer holding periods when these factors apply.
- The more extreme these factors are, and the more they occur together, the more your return will tend to deviate from the Daily Target.

Fees and Expenses of the Fund

The table below describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund. You may pay

other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees

(fees paid directly from your investment)

Wire Fee \$10

Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

| | Investor Class |
|---|---------------------|
| Investment Advisory Fees | 0.45% |
| Other Expenses ¹ | <u>6.56%</u> |
| Total Annual Fund Operating Expenses Before Fee Waivers and Expense Reimbursements | 7.01% |
| Fee Waivers/Reimbursements ² | <u>-5.83%</u> |
| Total Annual Fund Operating Expenses After Fee Waivers and Expense Reimbursements | <u>1.18%</u> |

1 “Other Expenses” includes 0.08% of Interest Expense incurred in the course of implementing the Fund’s strategy.

2 ProFund Advisors LLC (“ProFund Advisors”) has contractually agreed to waive fees and to reimburse expenses, excluding Interest and FCM Expense, to the extent necessary to limit such fees and expenses to 1.10% through November 30, 2025. Amounts waived or reimbursed in a particular contractual period may be recouped by ProFund Advisors within three years subject to certain limitations.

Example: This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem or hold all of your shares at the end of each period. The example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same, except that the fee waiver/expense reimbursement is assumed only to pertain to the first year. Although your actual costs may be higher or lower, based on these assumptions your approximate costs would be:

| | 1 Year | 3 Years | 5 Years | 10 Years |
|----------------|--------|---------|---------|----------|
| Investor Class | \$120 | \$1,546 | \$2,916 | \$6,107 |

The Fund pays transaction and financing costs associated with the purchase and sale of securities and derivatives. These costs are not reflected in the table or the example above.

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when the Fund’s shares are held in a taxable account. These costs, which are not reflected in the Annual Fund Operating Expenses or in the example above, affect the Fund’s performance. During the most recent fiscal year, the Fund’s annual portfolio turnover rate was 0% of the average value of its portfolio. The portfolio turnover rate is calculated without regard to cash instruments or derivatives transactions. If such transactions were included, the Fund’s portfolio turnover rate would be significantly higher.

Principal Investment Strategies

The Fund invests in financial instruments that ProFund Advisors believes, in combination, should produce daily returns consistent with the Daily Target.

Bitcoin is a digital asset. The ownership and operation of bitcoin is determined by participants in an online, peer-to-peer network sometimes referred to as the “Bitcoin Network”. The Bitcoin Network connects computers that run publicly accessible, or “open source,” software that follows the rules and procedures governing the Bitcoin Network. This is commonly referred to as the Bitcoin Protocol (and is described in more detail in the section entitled “The Bitcoin Protocol” in the Fund’s Prospectus). Bitcoin may be used to pay for goods and services, stored for future use, or converted to a government-issued currency. As of the date of this Prospectus, the adoption of bitcoin for these purposes has been limited and bitcoin presently is not widely accepted as a means of payment.

The value of bitcoin is not backed by any government, corporation, or other identified body. Instead, its value is determined in part by the supply and demand in markets created to facilitate trading of bitcoin. Ownership and transaction records for bitcoin are protected through public-key cryptography. The supply of bitcoin is determined by the Bitcoin Protocol. No single entity owns or operates the Bitcoin Network. The Bitcoin Network is collectively maintained by (1) a decentralized group of participants who run computer software that results in the recording and validation of transactions (commonly referred to as “miners”), (2) developers who propose improvements to the Bitcoin Protocol and the software that enforces the protocol and (3) users who choose which version of the bitcoin software to run. From time to time, the developers suggest changes to the bitcoin software. If a sufficient number of users and miners elect not to adopt the changes, a

new digital asset, operating on the earlier version of the bitcoin software, may be created. This is often referred to as a “fork.” The value of the Fund may reflect the impact of these forks.

The Index is designed to measure the performance of a single bitcoin traded in USD and seeks to provide a proxy for the bitcoin market. The Index price is a composite of U.S. dollar-bitcoin trading activities reported by certain digital asset trading platforms that are evaluated based on a variety of different criteria, including the trading platforms’ oversight and governance controls, liquidity, capital controls, data transparency and data integrity. The digital asset trading platforms included in the Index are reevaluated quarterly. The Index is constructed and maintained by Bloomberg Index Services Limited. More information about the Index is published under the Bloomberg ticker symbol “BITCOIN”.

In order to obtain inverse or “short” exposure, the Fund intends to enter into cash-settled bitcoin futures contracts as the “seller.” In simplest terms, in a cash-settled futures market the seller pays the counterparty if the price of a futures contract goes up and receives cash from the counterparty if the price of the futures contract goes down.

The Fund will invest principally in the financial instruments listed below.

- **Derivatives** — Financial instruments whose value is derived from the value of an underlying asset or rate, such as bitcoin. These derivatives principally include:
 - **Bitcoin Futures Contracts** – Standardized, cash-settled bitcoin futures contracts traded on commodity exchanges registered with the Commodity Futures Trading Commission (“CFTC”). The Fund seeks to invest in cash-settled, front-month bitcoin futures.
 - **Swap Agreements** – The Fund typically enters into swap agreements that provide exposure to bitcoin. Swap agreements are derivative contracts entered into primarily with major global financial institutions for a specified period ranging from a day to more than one year. In a standard swap transaction, two parties agree to exchange or “swap” payments based on the change in value of an underlying asset or benchmark, such as exchange-traded funds (“ETFs”) or indexes. For example, two parties may agree to exchange the return (or differentials in rates of returns) earned or realized on a particular investment or instrument.
- **Money Market Instruments** — The Fund expects that any cash balances maintained in connection with its use of derivatives will typically be held in high quality, short-term money market instruments, for example:
 - **U.S. Treasury Bills** — U.S. government securities that have initial maturities of one year or less, and are

supported by the full faith and credit of the U.S. government.

- **Repurchase Agreements** — Contracts in which a seller of securities, usually U.S. government securities or other money market instruments, agrees to buy the securities back at a specified time and price.
- **Reverse Repurchase Agreements** – The Fund seeks to engage in reverse repurchase agreements, a form of borrowing or leverage, and uses the proceeds to help achieve the Fund’s investment objective.

ProFund Advisors uses a mathematical approach to investing in which it determines the type, quantity and mix of investment positions that it believes, in combination, the Fund should hold to produce daily returns consistent with the Daily Target. For these purposes a day is measured from the time of one net asset value (“NAV”) calculation to the next.

The Fund seeks to remain fully invested at all times in financial instruments that, in combination, provide inverse exposure consistent with the investment objective, without regard to market conditions, trends or direction.

The Fund seeks to rebalance its portfolio each day so that its exposure to the Index is consistent with the Daily Target. The Index’s movements during the day will affect whether the Fund’s portfolio needs to be rebalanced. For example, if the Index has risen on a given day, net assets of the Fund should fall (assuming there were no shares issued). As a result, the Fund’s exposure will need to be decreased. Conversely, if the Index has fallen on a given day, net assets of the Fund should rise (assuming there were no share redemptions). As a result, the Fund’s exposure will need to be increased.

In order to maintain its inverse exposure to the Index, the Fund intends to exit its futures contracts as they near expiration and replace them with new futures contracts with a later expiration date. Futures contracts with a longer term to expiration may be priced lower than futures contracts with a shorter term to expiration, a relationship called “backwardation.” When rolling short futures contracts that are in backwardation, the Fund will close its short position by buying the expiring contract at a relatively higher price and selling a longer-dated contract at a relatively lower price. The presence of backwardation would be expected to adversely affect the performance of the Fund.

Conversely, futures contracts with a longer term to expiration may be priced higher than futures contracts with a shorter term to expiration, a relationship called “contango.” When rolling short futures contracts that are in contango, the Fund will close its short position by buying the expiring contract at a relatively lower price and selling a longer-dated contract at a relatively higher price. The presence of contango may positively affect the performance of the Fund.

The Fund expects to gain inverse exposure by investing a portion of its assets in a wholly-owned subsidiary of the Fund organized under the laws of the Cayman Islands and advised by ProFund

Advisors. Because the Fund intends to qualify for treatment as a regulated investment company (“RIC”) under Subchapter M of the Internal Revenue Code of 1986, as amended, the Fund intends to invest no more than 25% of the Fund’s total assets in the subsidiary at each quarter end of the Fund’s tax year. Exceeding this amount may have tax consequences, see the section entitled “Tax Risk” in the Fund’s Prospectus for more information. References to investments by the Fund should be read to mean investments by either the Fund or the subsidiary.

Please see “Investment Objectives, Principal Investment Strategies and Related Risks” in the Fund’s Prospectus for additional details.

Principal Risks

You could lose money by investing in the Fund.

- **Investment Strategy Risk** – The Fund obtains short exposure to bitcoin in a manner designed to provide inverse exposure to the single day returns of the Index. **The Fund does not directly short bitcoin.** Investors seeking to short bitcoin directly should consider an investment other than the Fund. While the performance of bitcoin futures contracts, in general, has historically been highly correlated to the performance of “spot” bitcoin, there can be no guarantee that this will continue. “Spot” bitcoin refers to bitcoin that can be purchased immediately.
- **Bitcoin Market Volatility Risk** – The prices of bitcoin and bitcoin futures have historically been highly volatile. The value of the Fund’s inverse exposure to bitcoin futures – and therefore the value of an investment in the Fund – could decline significantly and without warning, including to zero. If you are not prepared to accept significant and unexpected changes in the value of the Fund and the possibility that you could lose your entire investment in the Fund you should not invest in the Fund.

Trading prices of bitcoin and other digital assets have experienced significant volatility in recent periods and may continue to do so. For instance, there were steep increases in the value of certain digital assets, including bitcoin over the course of 2021, and multiple market observers asserted that digital assets were experiencing a “bubble.” These increases were followed by steep drawdowns throughout 2022 in digital asset trading prices, including for bitcoin. These episodes of rapid price appreciation followed by steep drawdowns have occurred multiple times throughout bitcoin’s history, including in 2011, 2013-2014, and 2017-2018, before repeating again in 2021-2022. In 2023 and over the course of 2024, bitcoin prices have continued to exhibit extreme volatility. Such volatility is expected to persist.

- **Bitcoin Futures Risk** – The market for bitcoin futures may be less developed, and potentially less liquid and more volatile, than more established futures markets. While the bitcoin futures market has grown substantially since bitcoin futures commenced trading, there can be no assurance that this growth will continue. The price for bitcoin futures contracts is

based on a number of factors, including the supply of and the demand for bitcoin futures contracts. Market conditions and expectations, regulatory limitations or limitations imposed by the listing exchanges or futures commission merchants (“FCMs”) (e.g., margin requirements, position limits, and accountability levels), collateral requirements, availability of counterparties, and other factors each can impact the supply of and demand for bitcoin futures contracts.

Market conditions and expectations, margin requirements, position limits, accountability levels, collateral requirements, availability of counterparties, and other factors may also limit the Fund’s ability to achieve its desired exposure to bitcoin futures contracts. If the Fund is unable to achieve such exposure it may not be able to meet its investment objective and the Fund’s returns may be different or lower than expected. Additionally, collateral requirements may require the Fund to liquidate its positions, potentially incurring losses and expenses, when it otherwise would not do so. Investing in derivatives like bitcoin futures may be considered aggressive and may expose the Fund to significant risks. These risks include counterparty risk and liquidity risk.

The performance of bitcoin futures contracts, in general, has historically been highly correlated to the performance of bitcoin. However, there can be no guarantee this will continue. Transaction costs (including the costs associated with futures investing), position limits, the availability of counterparties and other factors may impact the cost of bitcoin futures contracts and decrease the correlation between the performance of bitcoin futures contracts and bitcoin, over short or even long-term periods. In the event that there are persistent disconnects between bitcoin and bitcoin futures, the Fund may not be able to obtain the desired inverse exposure and may not be able to achieve its investment objective.

Moreover, price differences between bitcoin and bitcoin futures will expose the Fund to risks different from, and possibly greater than, the risks associated with investing directly in bitcoin, including larger losses or smaller gains.

- **Short or Inverse Investing Risk** — You will lose money when the Index rises – a result that is the opposite from a traditional index fund. Obtaining inverse or “short” exposure may be considered an aggressive investment technique. The costs of

obtaining this short exposure will lower your returns. If the level of the Index approaches a 100% increase at any point in the day, you could lose your entire investment. As a result, an investment in the Fund may not be suitable for all investors.

- **Holding Period Risk** — The performance of the Fund for periods longer than a single day will likely differ from the Daily Target. This difference may be significant. **If you are considering holding fund shares for longer than a day, it’s important that you understand the impact of Index returns and Index volatility (how much the value of the Index moves up and down from day-to-day) on your holding period return.** Index volatility has a negative impact on Fund returns. During periods of higher Index volatility, the Index volatility may affect the Fund’s returns as much as or more than the return of the Index.

The following table illustrates the impact of Index volatility and Index return on Fund returns for a hypothetical one-year period. However, these effects will impact your return for any holding period other than a day. **The longer you hold shares of the Fund, the more magnified these effects will be. As a result, you should consider monitoring your investments in the Fund in light of your individual investment goals and risk tolerance.**

In the table areas shaded darker represent those scenarios where the Fund can be expected to return less than the Daily Target. As the table shows, your return will tend to be worse than the Daily Target when there are smaller Index gains or losses and higher Index volatility. Your return will tend to be better than the Daily Target when there are larger Index gains or losses and lower Index volatility. You may lose money when the Index return is flat (i.e., close to zero) and you may lose money when the Index falls.

The table uses hypothetical annualized Index volatility and Index returns to illustrate the impact of these two factors on Fund performance over a one-year period. It does not represent actual returns. Each row corresponds to the level of a hypothetical Index return for a one-year period. Each column corresponds to a level of hypothetical annualized Index volatility. For example, the Fund may mistakenly be expected to achieve a -20% return on a yearly basis if the annual Index return were 20%. However, as the table shows, with a one-year Index return of 20% and an annualized Index

volatility of 50%, the Fund could be expected to return -35.1%.

| Index Performance | | Estimated Fund Returns | | | | |
|-------------------|-------------------------------------|--------------------------|--------|--------|--------|--------|
| | | One Year Volatility Rate | | | | |
| One Year Index | Inverse (-1x) of the One Year Index | 10% | 25% | 50% | 75% | 100% |
| -80% | 80% | 395.0% | 369.7% | 289.4% | 184.9% | 83.9% |
| -60% | 60% | 147.5% | 134.9% | 94.7% | 42.4% | -8.0% |
| -40% | 40% | 65.0% | 56.6% | 29.8% | -5.0% | -38.7% |
| -20% | 20% | 23.8% | 17.4% | -2.6% | -28.8% | -54.0% |
| 0% | 0% | -1.0% | -6.1% | -22.1% | -43.0% | -63.2% |
| 20% | -20% | -17.5% | -21.7% | -35.1% | -52.5% | -69.3% |
| 40% | -40% | -29.3% | -32.9% | -44.4% | -59.3% | -73.7% |
| 60% | -60% | -38.1% | -41.3% | -51.3% | -64.4% | -77.0% |
| 80% | -80% | -45.0% | -47.8% | -56.7% | -68.3% | -79.6% |
| 100% | -100% | -50.5% | -53.0% | -61.1% | -71.5% | -81.6% |
| 120% | -120% | -55.0% | -57.3% | -64.6% | -74.1% | -83.3% |
| 140% | -140% | -58.7% | -60.9% | -67.5% | -76.3% | -84.7% |
| 160% | -160% | -61.9% | -63.9% | -70.0% | -78.1% | -85.9% |
| 180% | -180% | -64.6% | -66.4% | -72.2% | -79.7% | -86.9% |

Assumes: (a) no dividends paid with respect to securities included in the Index; (b) no Fund expenses; and (c) borrowing/lending rates (to obtain inverse exposure) of zero percent. If these were included the Fund's performance would be different from that shown.

The Index's annualized historical volatility rate for the five-year period ended July 31, 2024 was 62.55%. The Index's highest July to July volatility rate during the five-year period was 72.96% (July 30, 2021). The Index's annualized total return performance for the five-year period ended July 31, 2024 was 45.40%. Historical Index volatility and performance do not predict future Index volatility and performance.

For more information, including additional graphs and charts demonstrating the effects of Index volatility and Index return on the long-term performance of the Fund, see "Understanding the Risks and Long-Term Performance of a Daily Objective Fund" in the Fund's Prospectus.

- **Correlation Risk** — A number of factors may affect the Fund's ability to achieve a high degree of inverse correlation with the Index. Fees, expenses, transaction costs, financing costs associated with the use of derivatives, among other factors, will adversely impact the Fund's ability to meet its Daily Target. In addition, if for any reason the Fund is unable to rebalance all or a portion of its investments, the Fund may have exposure to the Index that is significantly greater or less than the Daily Target. Any of these factors may prevent the Fund from achieving exposure consistent with the Daily Target.
- **Derivatives Risk** — Investing in derivatives to obtain inverse exposure may be considered aggressive and may expose the

Fund to greater risks including counterparty risk and correlation risk. The Fund may lose money if its derivatives do not perform as expected and may even lose money if they do perform as expected. To the extent the Fund invests in swaps that use an ETF as the reference asset, the Fund will be subject to the risks of that ETF including the risk that the ETF may not meet its investment objective. In addition, the Fund may be subject to greater correlation risk since the performance of the ETF may not correlate to the performance of the Index. Any costs associated with using derivatives will reduce the Fund's return.

- **Counterparty Risk** — The Fund may lose money if a counterparty does not meet its contractual obligations. With respect to swap agreements, if the Index has a dramatic intraday move that causes a material decline in the Fund's net assets, the terms of a swap agreement between the Fund and its counterparty may permit the counterparty to immediately close out the transaction with the Fund. In that event, the Fund may be unable to enter into another swap agreement or invest in other derivatives to achieve its investment objective.
- **Leverage Risk** — Leverage increases the risk of a total loss of an investor's investment, may increase the volatility of the Fund, and may magnify any differences between the performance of the Fund and the Index.
- **Bitcoin Risk** — Bitcoin is a relatively new innovation and is subject to unique and substantial risks. The market for bitcoin is subject to rapid price swings, changes and uncertainty.

The further development of the Bitcoin Network and the acceptance and use of bitcoin are subject to a variety of factors that are difficult to evaluate. The slowing, stopping or reversing of the development of the Bitcoin Network or the acceptance of bitcoin may adversely affect the price and liquidity of bitcoin. The widespread adoption of a competing digital asset or blockchain may result in a reduction in demand for bitcoin. A significant portion of the demand for bitcoin may be the result of speculation. Such speculation regarding the potential future appreciation in the price of bitcoin may artificially inflate or deflate the price of bitcoin and increase volatility. Bitcoin is subject to the risk of fraud, theft, manipulation or security failures, operational or other problems that impact digital asset trading venues. Additionally, if one or a coordinated group of miners were to gain control of 51% of the Bitcoin Network, they would have the ability to execute extensive attacks, manipulate transactions, halt payments and fraudulently obtain bitcoin. A significant portion of bitcoin is held by a small number of holders sometimes referred to as "whales". Transactions by these holders may influence the price of bitcoin.

Unlike the exchanges for more traditional assets, such as equity securities and futures contracts, bitcoin and digital asset trading venues are largely unregulated, may be operating out of compliance with regulation, and are highly fragmented. As a result of the lack of regulation, individuals or groups may

engage in fraud or market manipulation (including using social media to promote bitcoin in a way that artificially increases the price of bitcoin). Investors may be more exposed to the risk of theft, fraud and market manipulation than when investing in more traditional asset classes. Over the past several years, a number of digital asset trading venues have been closed due to fraud, failure or security breaches. Investors in bitcoin may have little or no recourse should such theft, fraud or manipulation occur and could suffer significant losses. Legal or regulatory changes may negatively impact the operation of the Bitcoin Network or restrict the use of bitcoin. In addition, digital asset trading venues, bitcoin miners, and other participants may have significant exposure to other digital assets. Instability in the price, availability or legal or regulatory status of those instruments may adversely impact the operation of the digital asset trading venues and the Bitcoin Network.

As a result, events that are not necessarily related to the security or utility of bitcoin can nonetheless cause significant volatility in the price of bitcoin (e.g., the collapse of TerraUSD in May 2022 and FTX Trading Ltd. in November 2022). Alternatively, legal or regulatory changes may increase the acceptance and adoption of bitcoin. The realization of any of these risks could result in increased volatility and in some instances could result in a sharp increase in the value of bitcoin and bitcoin futures.

- **Investment Capacity Risk** – If the Fund’s ability to obtain inverse exposure to bitcoin futures contracts consistent with its investment objective is disrupted for any reason including, limited liquidity in the bitcoin futures market, a disruption to the bitcoin futures market, or as a result of margin requirements or position limits imposed by the Fund’s futures commission merchants (“FCMs”), the CME, or the CFTC, the Fund would not be able to achieve its investment objective and may experience significant losses. The Adviser may, in its sole discretion and without prior notice, limit or reject purchases of Fund shares. This is often referred to as “closing” the Fund. The Adviser may re-open the Fund in its sole discretion and without prior notice.
- **Bitcoin Futures Capacity Risk** – If the Fund’s ability to obtain exposure to bitcoin futures contracts consistent with its investment objective is disrupted for any reason including, for example, limited liquidity in the bitcoin futures market, or a disruption to the bitcoin futures market, as a result of margin requirements, position limit, accountability levels, or other limitations imposed by the Fund’s futures commission merchants (“FCMs”), the listing exchanges or the CFTC, the Fund may not be able to achieve its investment objective and may experience significant losses.

In such circumstances, the Advisor intends to take such actions as it believes appropriate and in the best interest of the Fund. Any disruption in the Fund’s ability to obtain inverse exposure to bitcoin futures contracts will cause the Fund’s performance

to deviate from the inverse performance of bitcoin and bitcoin futures. Additionally, the ability of the Fund to obtain inverse exposure to bitcoin futures contracts is limited by certain tax rules that limit the amount the Fund can invest in its wholly-owned subsidiary as of the end of each tax quarter. Exceeding this amount may have tax consequences, see the section entitled “Tax Risk” in the Fund’s Prospectus for more information.

- **Cost of Futures Investment Risk** – As discussed above, when a bitcoin futures contract is nearing expiration, the Fund will “roll” the futures contract. This means it will generally exit its position in such contract and enter into a new position in a bitcoin futures contract with a later expiration date. When rolling short futures contracts that are in backwardation, the Fund will close its short position by buying the expiring contract at a relatively higher price and selling a longer-dated contract at a relatively lower price. Backwardation in the bitcoin futures market may have a significant adverse impact on the performance of the Fund. Both contango and backwardation may cause bitcoin futures to perform differently than spot bitcoin and may limit or prevent the Fund from achieving its investment objective.
- **Subsidiary Investment Risk** — Changes in the laws of the United States and/or the Cayman Islands, under which the Fund and the subsidiary are organized, respectively, could result in the inability of the Fund to operate as intended and could negatively affect the Fund and its shareholders.
- **Borrowing Risk** – The Fund may borrow for investment purposes using reverse repurchase agreements. In particular, the Fund may enter into reverse repurchase agreements at or near its tax quarter-end. The cost of borrowing may reduce the Fund’s return during those periods. Borrowing may cause the Fund to liquidate positions under adverse market conditions to satisfy its repayment obligations. Borrowing increases the risk of loss and may increase the volatility of the Fund. There can be no assurance that the Fund will be able to enter into reverse repurchase agreements or obtain favorable terms for those agreements.
- **Money Market Instruments Risk** — Adverse economic, political or market events affecting issuers of money market instruments, defaults by counterparties or changes in government regulations may have a negative impact on the performance of the Fund.
- **Non-Diversification Risk** — The Fund has the ability to invest a relatively high percentage of its assets in the securities of a small number of issuers or in financial instruments with a single counterparty or a few counterparties. This may increase the Fund’s volatility and increase the risk that the Fund’s performance will decline based on the performance of a single issuer or the credit of a single counterparty.
- **Concentration Risk** — The Fund has a significant portion of its value in bitcoin futures. As a result, the Fund may be

subject to greater market fluctuations than a fund that is more broadly invested across industries.

- Index Performance Risk** — The Index used by the Fund may underperform other asset classes and may underperform other similar indices. The Index is maintained by a third party provider unaffiliated with the Fund or ProFund Advisors. There can be no guarantee that the methodology underlying the Index or the daily calculation of the Index will be free from error.
- Active Investor Risk** — The Fund permits short-term trading of its securities. This may have a negative impact on the Fund’s ability to achieve its investment objective or maintain a consistent level of operating expenses. In certain circumstances, the Fund’s expense ratio may vary from current estimates or the historical ratio disclosed in this Prospectus. In addition, this will increase portfolio turnover and may result in additional costs for the Fund.
- Early Close/Late Close/Trading Halt Risk** — An exchange or market may close early, close late or issue trading halts on bitcoin futures contracts. In these circumstances, each Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and/or may incur substantial trading losses.

Please see “Investment Objectives, Principal Investment Strategies and Related Risks” in the Fund’s Prospectus for additional details.

Investment Results

The bar chart below shows how the Fund’s investment results for Investor Class shares during its first full calendar year of operations, and the table shows how the Fund’s average annual total returns for various periods compare with a broad measure of market performance. This information provides some indication of the risks of investing in the Fund. In addition, the Fund’s performance information reflects applicable fee waivers and/or expenses limitations, if any, in effect during the periods presented. Absent such fee waivers/expense limitations, if any, performance would have been lower. Past results (before and after taxes) are not predictive of future results. Updated

information on the Fund’s results can be obtained by visiting the Fund’s website (www.profund.com).

Annual Returns as of December 31

Best Quarter (ended 9/30/2023): 11.27%
 Worst Quarter (ended 3/31/2023): -48.05%
 Year-to-Date (ended 9/30/2024): -43.45%

Average Annual Total Returns

As of December 31, 2023

| | One Year | Since Inception | Inception Date |

- 1 Reflects no deduction for fees, expenses or taxes. “Since Inception” returns are calculated from the date the Fund commenced operations, not the date of inception of the Index.
- 2 Reflects no deduction for fees, expenses or taxes. “Since Inception” returns are calculated from the date the Fund commenced operations, not the date of inception of the Index. Adjusted to reflect the reinvestment of dividends paid by issuers in the Index.

Management

The Fund is advised by ProFund Advisors. Alexander Ilyasov, Senior Portfolio Manager, and George Banian, Portfolio Manager, have jointly and primarily managed the Fund since inception.

Purchase and Sale of Fund Shares

The **minimum initial investment** amounts, which may be waived at the discretion of the Fund, are:

- \$1,000 for accounts that list a financial professional.
- \$1,000 for self-directed accounts.

You may purchase, redeem or exchange Fund shares on any day which the New York Stock Exchange is open for business. Depending on where your account is held, you may redeem your shares by contacting your financial professional or the Fund by mail, telephone, wire transfer or on-line (www.profund.com).

Tax Information

The Fund's distributions generally are taxable, and will be taxed as ordinary income, qualified dividend income or capital gains,

unless you are investing through a tax-advantaged arrangement, such as a 401(k) plan or an individual retirement account. You may be taxed later upon withdrawal of monies from such tax-advantaged arrangements. The Fund intends to distribute income, if any, monthly, and capital gains, if any, at least annually.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase Fund shares through a financial intermediary, such as a broker-dealer or investment adviser, the Fund and its distributor may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other financial intermediary to recommend the Fund over another investment. Ask your financial intermediary or visit your financial intermediary's website for more information.

Receive investor materials electronically:

Shareholders may sign up for electronic delivery of investor materials. By doing so, you will receive the information faster and help us reduce the impact on the environment of providing these materials. To enroll in electronic delivery,

1. Go to www.icsdelivery.com
2. Select the first letter of your brokerage firm's name.
3. From the list that follows, select your brokerage firm. If your brokerage firm is not listed, electronic delivery may not be available. Please contact your brokerage firm.
4. Complete the information requested, including the e-mail address where you would like to receive notifications for electronic documents.

Your information will be kept confidential and will not be used for any purpose other than electronic delivery. If you change your mind, you can cancel electronic delivery at any time and revert to physical delivery of your materials. Just go to www.icsdelivery.com, perform the first three steps above, and follow the instructions for cancelling electronic delivery. If you have any questions, please contact your brokerage firm.
